Downloading Windows Updates

There are Several Ways to access Windows updates. This tutorial will go through the two most popular ways to update your windows operating system.

HOW TO

Option A (Recommended)

1. Start → Programs → Windows Update
 - a. This will open a web browser
 - b. If a pop-up menu displays asking you to download an application, select yes or run. This application is safe and approved by Microsoft to automatically detect the status of your windows drivers and utilities and then to determine if your system requires updates.
2. Click “**EXPRESS**”, your computer is now searching for all available updates.
3. Once the search is complete, select the updates you would like to install and click “**INSTALL.**” Of course, if your computer does not find any updates, simply browse to another site and continue your previous ventures.
4. That’s It! You’re finished!

Option B

1. Open a web browser of your choice
2. Browse to <http://windowsupdate.microsoft.com>
 - a. If a pop-up menu displays asking you to download an application, select yes or run. This application is safe and approved by Microsoft to automatically detect the status of your windows drivers and utilities and then to determine if your system requires updates.
3. Continue to **Option A, Step 2**
