Finding Your Antivirus Program

Your computer must be equipped with a working antivirus program. If you do not have an antivirus program, UVaWise will provide one for you.

HOW TO:

1. Start → Programs
 - a. This will open your Programs list
2. Browse through your programs list for any software that may mention Antivirus, Protection, or another related term
 - a. If you're unsure as to what the program is, simply open it and check it out.
3. The most common antivirus programs on computers today are Norton(Symantec) and McAfee. So, either one of those will work perfectly. If you have an alternative antivirus program, a TSS staff member must confirm that is it working properly and suitable to protect your computer against viruses and other online threats.

Please note

Users can also go to Start → Control Panel → Add/Remove Programs to browse for an antivirus program.
